Intrasense continues its growth in Europe

Intrasense (FR0011179886 - ALINS), specialist in medical imaging software solutions and designer of Myrian®, announces that several partnership agreements have been signed in Europe, strengthening its positions on its historical market.

Myrian® at the heart of innovative projects in France

The Sainte-Catherine Institute of Avignon, a cancer screening and treatment center, recognized for its clinical research activity and the evaluation of new radiotherapy techniques, has chosen to make Myrian® available to all its practitioners.

Seamlessly integrated into the institution information system, Myrian® has been deployed in conjunction with the « deconstructed » PACS solution [Lify](#), a platform edited by Osimis. Allowing more efficient teamwork, this partnership supports innovation within the oncology department « *We appreciate the sharing of a unique visualization solution between departments, independent of any modality, to harmonize our practices.* », comments Céline Belvédère, the Sainte-Catherine Institute imaging division manager.

As a first successful collaboration, this project initiates a more long-term partnership between Intrasense and Osimis. The two partners will combine their complementary expertise on other new projects, based on their independence and a high degree of adaptability.

Cutting-edge solutions for hepatic surgery in Spain

On the Spanish market, the clinical application Myrian® XP-Liver is continuing its development reaching hepatic surgeons, with a partnership concluded with the health products distributor [Dismeval](#). « *Myrian® XP-Liver has particularly relevant features for hepatic surgery planning* », confirms Salvador Forés, manager of Dismeval. « *It's a cutting-edge software solution, that complements our operating rooms offering* ».

A partnership for Myrian® Imaging Layer in Bulgaria

Myrian® Imaging Layer has just been chosen by Saint-Ivan-Rilski University Hospital in Sofia (Bulgaria), in an integrated mode into a PACS solution from [Software Company](#), an Intrasense partner and leading actor on the Bulgarian market. This partnership with Software Company ensures a long-term foothold for Myrian® in this market, with strong development prospects.

Valentin Tafrajiiski, sales manager at Software Company, is confident: « We are happy to implement all Myrian® rich functionalities to our solution, that allows us to differentiate ourselves strongly. We also know that Myrian® Studio will open possibilities to our customers to customize their clinical applications portfolio. »

About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device called Myrian®, a software platform that facilitates diagnosis, decision-making and therapeutic follow-up and makes them more secure. Thanks to Myrian®, more than 800 health institutions spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies, Myrian® also provides a universal image treatment solution that can be fully integrated in any health information system. Intrasense includes 40 employees among which 20 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and invested more than 10 million euros in Research & Development since its creation.
