## CE marking for the CT protocol dedicated to COVID-19

Intrasense (FR0011179886 - ALINS), a specialist in medical imaging software solutions and designer of Myrian, announces that the scanner reading protocol dedicated to COVID-19 has obtained its CE marking as a world premiere.

### A medical device for use in clinical routine

Now Class IIa medical device, the CE marking is a major step offering an even wider use of the solution. Useful for all key stages of the fight against the epidemic, from screening to clinical follow-up through the analysis of the pathological stage, the protocol allows an objective and precise quantification of the patient's pulmonary stage, optimizing adaptation of therapeutic response.

Its deployment in clinical routine completes its use in clinical studies and trials for drug and treatment evaluations.

This step allows a real mass deployment of the solution both in Europe, thanks to this CE marking, but also in the United States, most affected country by the pandemic, thanks to the FDA authorization.

### Large scale deployment

With currently more than 350 requests from hospitals and clinics worldwide for this specific solution, Intrasense continues to position itself as a reference player in medical imaging, supporting healthcare professionals during this health crisis. Key contacts have been initiated at the highest levels in Europe and the United States for a massive deployment on these continents.

Any interested healthcare professional, hospital or clinic can obtain the solution free of charge by simply filling in the form on [the company's website](#).

### About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device named Myrian®, a software platform facilitating and ensuring diagnosis, decision-making and therapeutic follow-up. Thanks to Myrian®, more than 1000 hospitals and clinics spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies and organs, Myrian® provides a universal medical image processing solution which can be fully integrated into any healthcare information system. Intrasense has more than 40 employees among which 15 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and has invested more than 10 million euros in Research & Development since its creation.
