## Intrasense and MeVis sign a strategic partnership

Intrasense (FR0011179886 - ALINS), a specialist in medical imaging software solutions and Myrian® designer, and MeVis Medical Solutions AG specialized in the development of clinical applications integrating artificial intelligence, announce a global partnership in the field of lung diseases.

### A unique combination of expertise serving patient care

Being the most common cancer in the world with more than 2 million cases in 2018<sup>(1)</sup>, lung cancer is a pathology for which Intrasense has been mobilized for many years. Its renowned clinical applications such as Myrian XP-Lung and Myrian XP-Lung Nodule are broadly used worldwide and the recent success of the newly created protocol dedicated to COVID-19 has again proven the expertise of the company in creating clinically relevant solutions based on cutting edge technologies.

MeVis Medical Solutions AG provides cutting edge disease-oriented software solutions for breast, lung, neuro, and liver imaging to medical professionals. MeVis' artificial intelligence aided Veolity® LungCAD automatically detects actionable lung nodules in computed tomography (CT) images. A rapid and safe radiological diagnosis is carried out thanks to a longitudinal follow-up and a quantitative volumetric assessment of lesion growth.

### Creating a unique clinical value with Myrian platform integration

Thanks to Myrian platform capabilities, MeVis' AI-aided Veolity® LungCAD is seamlessly integrated into Myrian clinical workflow. This allows users to benefit from additional cutting-edge technology within Intrasense complete software suite.

The solution will be available within the first semester of 2021, the partnership is focused on the integration and marketing of the solution by Intrasense on the European market.

Thanks to this partnership, Intrasense is pursuing its strategy of enriching its own portfolio with solutions fitting radiologists' clinical needs and positioning artificial intelligence technologies to serve patients health.

## About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device named Myrian®, a software platform facilitating and ensuring diagnosis, decision-making and therapeutic follow-up. Thanks to Myrian®, more than 1000 hospitals and clinics spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies and organs, Myrian® provides a universal medical image processing solution which can be fully integrated into any healthcare information system. Intrasense has more than 40 employees among which 15 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and has invested more than 10 million euros in Research & Development since its creation. ## About MeVis

Founded in 1997, MeVis Medical Solutions AG significantly contributes to the early detection and diagnostics of cancer, thus facilitating an early and tailor-made treatment of the disease. In order to meet this challenge, the company develops innovative software for the analysis and processing of medical image data. Clinical focuses are the image-based early detection and diagnostics of epidemiologically important diseases of the breast, lung, and liver, and neurological disorders. Furthermore, MeVis Medical Solutions AG provides technical 3D visualization services of the liver and the pancreas for professional education, publication, presentation, and research.
